About Us

Established in 2008 on the basis of a solid mining and civil career, Walkers Diesel Services has grown from a fully mobile operation to a 1.2 hectare site with mechanical and fabrication workshops totalling a floor area of 1,300m². We provide a full range of heavy duty and agricultural mechanical repair and maintenance as well as custom steel manufacture and fabrication services.

We troubleshoot and solve the problems that others can't by investing time into research and collaborations.

- Mechanical repairs and maintenance new and old trucks, tractors, earthmoving gear, small engines, fork lifts, spreaders, air compressors, generators
- Tractor and truck rebuilds and restorations
- Auto electrical - cameras, sensors, lights
- Machinery air conditioning repairs and maintenance
- Hydraulics - mobile service with hoses, fittings and repairs
- Exhaust repairs and replacement
- Jaltest truck and earthmoving computer diagnostics and error code identification
- Fabrication and manufacturing - new chaser bin builds, refurbishment of implements, storage units, trailer and ancillary equipment
- Lancing and gouging
- Machining, milling and lathe work
- CNC plasma table to make parts, specialised tooling and signs
- Sandblasting and painting
- Ditch witch and tilt tray services

Regional Capability

Walkers Diesel Services your regional solution to the challenge of metropolitan backlogs and wait lists. Maintain your client schedules by utilising our capability and capacity.

Location & Facilities

Wongan Hills is located within main north-south and east-west freight routes which offers a convenience for equipment drop off and pickup. Instead of transporting equipment right into the city leave it with us. Alternatively truck your overflow work out to us instead of waiting in the queue in Perth. We are 177km from Welshpool and 60km from the Great Northern Highway. There is room in our yard to turn a road train around, a mechanical repair workshop with wireless truck hoist, computer diagnostics and space for 4 trucks. In the fabrication shop there are lathes with bed size up to 3500mm, CNC plasma, milling, pressing and welding equipment.
